ECO CAN HOLDERS

Eco Can-Holders, the first eco-friendly can holder made from fiber by-products and other compostable materials, designed to replace plastic options.

E6PR's Compostable Can-Holders are made from natural plant fibers and designed to safely pack and carry canned liquids, throughout the whole supply chain; from the canning line to retail shelves, and on to your consumers.

When disposed of properly at a composting facility, the Eco-Rings will degrade in days, making these a sustainable alternative to plastic and cardboard options, which require expensive recovery programs and convey downgrading problems.

E6PR goes beyond recyclability and goes for compostability!

Available for Sleek Style

Application Options

Manual Applicator

A simple and yet effective lever system solution to apply the eco-holders, reaching speeds of up to 40 cans per minute.

Demo Video

Case Applicator

Semi-Automatic system solution to apply the eco-holders, reaching speeds of up to 70 cans per minute.
